1. (**10 marks**)

   (a) (**4 marks**) Let QUADEQ be the language of all satisfiable sets of quadratic equations over $0/1$ variables (a quadratic equation over $u_1, ..., u_n$ has the form $\sum_{i,j \in [n]} a_{i,j} u_i u_j + \sum_{i \in [n]} a_i u_i = b$) where addition is modulo 2. Show that QUADEQ is NP-complete.

   (b) (**6 marks**) Design a deterministic polynomial-time algorithm to solve the 2SAT problem (i.e., when every clause of the input CNF formula has at most 2 literals).

2. (**7 marks**) In the SUBSET SUM problem, we are given a list of numbers $a_1, ..., a_n$ and a number T and need to decide whether there exists a subset $S \subseteq [n]$ such that $\sum_{i \in S} a_i = T$. Prove that SUBSET SUM is NP-complete.

3. (**6 marks**) Let $f : \mathbb{Z} \to \mathbb{Z}$ be a bijection that maps n-bit integers to n-bit integers. Such a f is a *one-way function* if f is polynomial-time computable, but f^{-1} is not. Show that if f is a one-way function, then the language $L_f := \{(x, y) \; : \; f^{-1}(x) < y\} \in \mathsf{NP} \cap \mathsf{co\text{-}NP}$, but L_f is not in P.

4. (**6 marks**) Consider the following variant of the graph isomorphism problem: given two graphs $H = (U, F)$ and $G = (V, E)$ (not necessarily having the same number of vertices), check if there is a one-to-one map (i.e., an injection) $\phi : U \to V$ such that $(u_1, u_2) \in F$ if and only if $(\phi(u_1), \phi(u_2)) \in E$. Prove that this variant of the graph isomorphism problem is NP-complete.

5. (**9 marks**) Prove that there exists a language B such that $\mathsf{NP}^B \neq \mathsf{co\text{-}NP}^B$.

6. (**12 points**) Two languages $L_1, L_2 \subseteq \{0,1\}^*$ are said to be *p-isomorphic* if there is a bijection $f : \{0,1\}^* \to \{0,1\}^*$ such that $x \in L_1 \iff f(x) \in L_2$ and f and f^{-1} are polynomial-time computable. A language L is *sparse* if there exists a constant c such that for every integer $n \geq 1$, the number of strings of length n belonging to L is bounded by n^c.

   (a) (**4 points**) Show that if NP-complete languages are p-isomorphic to each other, then $\mathsf{P} \neq \mathsf{NP}$.

   (b) (**8 points**) Show that if a sparse language is NP-complete, then $\mathsf{P} = \mathsf{NP}$.
