Overview of E0 222: Automata and Computability

Deepak D'Souza

Department of Computer Science and Automation Indian Institute of Science, Bangalore.

August 4, 2016

Different Kinds of "Automata" or "State Machines"

- Finite-State Automata
- Pushdown Automata
- Turing Machines

Different Kinds of "Automata" or "State Machines"

- Finite-State Automata
- Pushdown Automata
- Turing Machines

Kind of results we study in Automata Theory

- Expressive power of the models in terms of the class of languages they define.
 - Characterisations of this class of languages
 - Myhill-Nerode theorem.
 - Büchi's logical characterisation.
 - Necessary conditions these classes satisfy
 - Pumping Lemma and ultimate periodicity (for Regular/CFL).
 - Parikh's Theorem (for Context-Free Languages).
- Decision procedures
 - Emptiness problem
 - Language inclusion problem
 - Configuration reachability problem.
- Computability (most compelling notion of computable function is via Turing Machines), Rice's Theorem.

Why study automata theory?

Corner stone of many subjects in CS:

- Compilers
 - Lexical analysis, parsing, regular expression search
- **2** Digital circuits (state minimization, analysis).
- Somplexity Theory (algorithmic hardness of problems)
- Mathematical Logic
 - Decision procedures for logical problems.
- Formal Verification
 - Configuration reachability
 - Is $L(\mathcal{A}) \subseteq L(\mathcal{B})$?

Uses in Verification

- System models are natural extensions of automata models
 - Programs with no dynamic memory allocation, no procedures = Finite State systems.
 - No dynamic memory allocation = Pushdown systems.
 - General program = Turing machine.
 - Programs with integer variables = Counter machines.

Decision procedures for emptiness, configuration reachability, etc, directly translate to decision procedures for programs.

To solve "model-checking" problem for logics that talk about infinite behaviour.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Uses in Logic

- Obtain decision procedure for satisfiability of a logic by translating a formula to an automaton and checking emptiness.
- Argue undecidability/incompleteness of a proof system.

What this course is about

What we study

- Connections between Logic and Automata
 - Büchi's logical characterization of regular languages
 - Decision procedures for logic (Büchi, Presburger logic, Gödel's Incompleteness).
- Pushdown Systems
 - Parikh's theorem on semi-linearity of CFL's
 - Reachability in pushdown systems
 - Deterministic PDA's and complementation
 - Visibly Pushdown Automata
 - Decision procedures
- Automata on infinite words
- Automata on Trees

Büchi's logical characterisation of automata

Describe properties of strings in a logical language
 Eg. "For all positions x in a word which are labelled a, there is a later position labelled b"

$$\forall x(Q_a(x) \Rightarrow \exists y(y > x \& Q_b(y))).$$

• DFA for the language:

• Büchi's result:

A language is regular iff it is definable by a sentence in this logic.

First-Order logic of $(\mathbb{N}, <)$.

- Interpreted over $\mathbb{N}=\{0,1,2,3,\ldots\}.$
- What you can say:

$$x < y$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

- Examples:

First-Order logic of $(\mathbb{N}, <)$.

- Interpreted over $\mathbb{N}=\{0,1,2,3,\ldots\}.$
- What you can say:

$$x < y$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

- Examples:
 - $\begin{array}{l} \bullet \quad \forall x \exists y (x < y). \\ \bullet \quad \forall x \exists y (y < x). \end{array}$

First-Order logic of $(\mathbb{N}, <)$.

- Interpreted over $\mathbb{N}=\{0,1,2,3,\ldots\}.$
- What you can say:

$$x < y$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

- Examples:
 - ∃ ∀x∃y(x < y).
 ≥ ∀x∃y(y < x).
 ∃x(∀y(y ≤ x)).

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

First-Order logic of $(\mathbb{N}, <)$.

- Interpreted over $\mathbb{N}=\{0,1,2,3,\ldots\}.$
- What you can say:

$$x < y$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

• Examples:

First-Order logic of $(\mathbb{N}, <)$.

- Interpreted over $\mathbb{N}=\{0,1,2,3,\ldots\}.$
- What you can say:

$$x < y$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

- Examples:
 - ↓ ∀x∃y(x < y).
 ∀x∃y(y < x).
 ∃x(∀y(y ≤ x)).
 ∀x∀y((x < y) ⇒ ∃z(x < z < y)).
- Question: Is there an algorithm to decide if a given FO(ℕ, <) sentence is true or not?

Büchi used automata to give such an algorithm.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Büchi automata

- Finite state automata that run over infinite words.
- How do we accept an *infinite* word? Acceptance mechanism proposed by Büchi: see if run visits a final state infinitely often.

Büchi automata

- Finite state automata that run over infinite words.
- How do we accept an *infinite* word? Acceptance mechanism proposed by Büchi: see if run visits a final state infinitely often.

Büchi automaton for finitely many a's

Presburger Logic

- First-Order logic of $(\mathbb{N}, <, +)$.
- Interpreted over $\mathbb{N} = \{0, 1, 2, 3, \ldots\}.$
- What you can say:

$$x + 2y < z + 1$$
, $\exists x \varphi$, $\forall x \varphi$, \neg , &, \lor .

- Examples:

Solutions to a system of linear inequalities: $\exists x \exists y (x + 2y \le 1 \& x = y).$

- **3** "Every number is odd or even": $\forall x \exists y (x = 2y \lor x = 2y + 1)$.
- Studied by Mojzesz Presburger, who gave a sound and complete axiomatization, as well as a decision procedure for validity, circa 1929.

Overall idea

 Represent interpretation of variables as (rows of) binary strings

x 001111y 100011z 011100

- Construct automata over such words, that accept all satisfying assignments of the variables, for atomic formulas.
- Use closure properties of automata to inductively construct automata for more complex formulas.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Representing numbers as binary strings

- Represent the number 3 by "011" or "0011" or "00011" etc.
- The automata will read the strings from right to left.
- Will read a tuple of bits: For example for the formula x ≤ 2y + 1 it will read inputs from the alphabet

$$\{0,1\}^2$$

which we represent as:

$$\left(\begin{array}{c}0\\0\end{array}\right), \left(\begin{array}{c}0\\1\end{array}\right), \left(\begin{array}{c}1\\0\end{array}\right), \left(\begin{array}{c}1\\1\end{array}\right).$$

• Thus, automaton constructed for a given formula will accept the reverse of actual interpretations.

Automaton for x + 2y - 3z = 1

Accepting run on:

x (= 0) :	000
y (= 2):	010
z(=1) :	001
x (= 15) :	001111
y (= 35) :	100011
z (= 28):	011100

but none on:

$$x (= 1) : 001$$

 $y (= 2) : 010$
 $z (= 1) : 001$

Gödel's Incompleteness result

There cannot be a sound and complete proof system for first-order arithmetic.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

What we can say in $FO(\mathbb{N}, +, \cdot)$

• "Every number has a successor"

$$\forall n \exists m (m = n + 1).$$

• "Every number has a predecessor"

$$\forall n \exists m (n = m + 1).$$

• "There are only finitely many primes"

$$\exists n \forall p(prime(p) \implies p < n).$$

• "There are infinitely many primes"

$$\forall n \exists p(prime(p) \& p > n).$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Gödel's Incompleteness result

There cannot be a sound and complete proof system for first-order arithmetic.

Formal language-theoretic proof: $\mathsf{Th}(\mathbb{N}, +, .)$ is not even recursively enumerable.

Myhill-Nerode Theorem

Myhill-Nerode Theorem:

Every regular language has a canonical DFA accepting it.

Some consequences:

- Any DFA for L is a refinement of its canonical DFA.
- "minimal" DFA's for *L* are isomorphic.

Parikh's Theorem for CFL's

$$\psi(w)$$
: "Letter-count" of a string w:

Eg : $\psi(aabab) = (3, 2)$.

If L is a context-free language, then $\psi(L)$ is semi-linear (Every CFL is letter-equivalent to a regular language).

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Reachable configurations of a Pushdown automaton

The set of reachable configurations of a Pushdown automaton is regular.

Useful for program analysis and verification of pushdown systems.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Course details

- Weightage: 40% assignments + seminar, 20% midsem exam, 40% final exam.
- Assignments to be done on your own.
- Dishonesty Policy: Any instance of copying in an assignment will fetch you a 0 in that assignment + one grade reduction.
- Seminar (in pairs) can be chosen from list on course webpage or your own topic.
- Course webpage:

```
www.csa.iisc.ernet.in/~deepakd/atc-2016/
```

- Teaching assistants for the course: P. Ezudheen and Inzemamul Haque.
- Those interested in crediting/auditing please send me an email so that I can add you to the course mailing list.
