# Reductions

Let  $L \subseteq A^*$  and  $M \subseteq B^*$  be two languages. We say L reduces to M and write  $L \leq M$  iff there exists a computable map  $\sigma: A^* \to B^*$  such that

 $w \in L$  iff  $\sigma(w) \in M$ .

# Examples of reductions

- Let L be the language {n | n is even } (with say n encoded in binary). Let L' be the language {I#m#r | I mod m = r}. Then L ≤ L' via the computable map n → n#2#0.
- Does L' reduce to L?
- Let L be the language  $\{M \mid M \text{ accepts } \epsilon\}$ . Then

#### $\mathrm{HP} \leq L.$

 $\bullet\,$  Describe a computable map  $\sigma$  which witnesses the reduction.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

# Reductions and recursive/re-ness

#### Theorem

If  $L \leq M$  then:

- **1** If M is r.e. then so is L.
- 2 If M is recursive then so is L.

#### Or to put it differently:

#### Theorem

If  $L \leq M$  then:

- **1** If L is not r.e. then neither is M.
- 2 If L is not recursive then neither is M.

# Examples of reductions

# Let *L* be the language $\{M \mid M \text{ accepts } \epsilon\}$ . Then

#### $\mathrm{HP} \leq L.$

• Describe a computable map  $\sigma$  which witnesses the reduction. Hence, since HP is undecidable (i.e. not recursive) so is *L*.

# Examples of reductions

# Let L be the language $\{M \mid M \text{ accepts a regular language}\}$ . Then $egreen HP \leq L.$

- $\bullet$  Describe a computable map  $\sigma$  which witnesses the reduction.
- Hence, since  $\neg$ HP is undecidable (i.e. not recursive) so is *L*.
- In fact, since  $\neg HP$  is not r.e., we can say that L is not r.e..

# Properties of languages

# A property P of languages over an alphabet A is a subset of languages over A.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

# Non-trivial and montone properties

• A property *P* is a non-trivial property of r.e. languages, if there is at least one r.e. language *L* satisfying *P*, and another *L'* not satisfying *P*.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- A property *P* is a non-trivial property of r.e. languages, if there is at least one r.e. language *L* satisfying *P*, and another *L'* not satisfying *P*.
  - E.g. "is empty" is non-trivial

- A property *P* is a non-trivial property of r.e. languages, if there is at least one r.e. language *L* satisfying *P*, and another *L'* not satisfying *P*.
  - E.g. "is empty" is non-trivial
  - "is not accepted by a TM" is trivial.
- A property P of languages is monotone (w.r.t r.e. languages) if for all r.e. sets A and B, whenever  $A \subseteq B$  and P(A), we have P(B).
- In other words, *P* is monotone if whenever a set has the property *P*, all its supersets have it as well.

- A property *P* is a non-trivial property of r.e. languages, if there is at least one r.e. language *L* satisfying *P*, and another *L'* not satisfying *P*.
  - E.g. "is empty" is non-trivial
  - "is not accepted by a TM" is trivial.
- A property P of languages is monotone (w.r.t r.e. languages) if for all r.e. sets A and B, whenever  $A \subseteq B$  and P(A), we have P(B).
- In other words, *P* is monotone if whenever a set has the property *P*, all its supersets have it as well.
  - "is infinite" is monotone,

- A property *P* is a non-trivial property of r.e. languages, if there is at least one r.e. language *L* satisfying *P*, and another *L'* not satisfying *P*.
  - E.g. "is empty" is non-trivial
  - "is not accepted by a TM" is trivial.
- A property P of languages is monotone (w.r.t r.e. languages) if for all r.e. sets A and B, whenever  $A \subseteq B$  and P(A), we have P(B).
- In other words, *P* is monotone if whenever a set has the property *P*, all its supersets have it as well.
  - "is infinite" is monotone,
  - "*L*(*M*) is finite" is not monotone.

# Rice's theorems

For a property P, we define

$$L_P = \{M \mid L(M) \text{ satisfies } P\}.$$

#### Theorem (Rice 1953)

Any non-trivial property of r.e. languages is undecidable. That is, if P is a non-trivial property of r.e. languages, then the language  $L_P$  is not recursive.

#### Theorem (Rice 1956)

Any non-monotone property of r.e. languages is not even recursively enumerable. That is, if P is a non-monotone property of r.e. languages, then the language  $L_P$  is not even recursively enumerable.

# Proof of Rice's Theorem 1

- Let P be a non-trivial property of r.e. languages. Then there are TM's K and T such that L(K) satisfies P and L(T) does not satisfy P.
- We show that  $L_P = \{M \mid L(M) \text{ satisfies } P\}$  is not recursive.
- Case 1: If  $\emptyset$  does not satisfy *P*. We reduce HP to  $L_P$ .
- Given M # x, construct a machine  $M' = \sigma(M \# x)$  that on input y
  - saves y on a separate track
  - writes x on its tape
  - runs as *M* on input *x*
  - if M halts on x, M' runs as K on y and accepts iff K accepts.

 $L(M') = \begin{cases} L(K) & \text{if } M \text{ halts on } x \\ \emptyset & \text{if } M \text{ does not halt on } x. \end{cases}$ 

# Proof of Rice's Theorem 1

- Case 2: If  $\emptyset$  satisfies *P*. We reduce  $\neg$ HP to *L<sub>P</sub>*.
- Given M#x, construct a machine M' = σ(M#x) that on input y
  - saves y on a separate track
  - writes x on its tape
  - runs as *M* on input *x*
  - if M halts on x, M' runs as T on y and accepts iff T accepts.

$$L(M') = \begin{cases} \emptyset & \text{if } M \text{ does not halt on } x \\ L(T) & \text{if } M \text{ halts on } x. \end{cases}$$

# Proof of Rice's Theorem 2

- Let *P* be a non-monotone property of r.e. sets.
- Then there are TM's K and T such that  $L(K) \subseteq L(T)$  and L(K) satisifies P but L(T) does not.
- We show  $\neg HP \leq L_P$ .
- Given M # x output the description of M' that
  - Given input *y* on Tape 1.
  - Copies y on Tape 2, writes x on Tape 3
  - Run (in an interleaved fashion) as *M* on *x*, *K* on *y*, and *T* on *y*.
  - accept iff either
    - K accepts y, or,
    - *M* halts on *x* and *T* accepts *y*.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

# Proof of Rice's Theorem 2

#### Notice that:

$$L(M') = \begin{cases} L(K) & \text{if } M \text{ does not halt on } x \\ L(T) & \text{if } M \text{ halts on } x. \end{cases}$$

# Some applications

From Rice's Theorem 1:

- "Accepts  $\epsilon$ " is undecidable.
- "Accepts an infinite language" is undecidable.

 $\{M \mid M \text{ accepts an infinite language}\}.$ 

From Rice's Theorem 2:

- "Accepts the empty language" is "highly" undecidable (non-r.e.).
- "Accepts a finite language" is highly undecidable (non-r.e.).

 $\{M \mid M \text{ accepts a finite language}\}.$ 

• "Accepts a regular language" is highly undecidable (non-r.e.).
